Therefore, this study applied granular sludge for anaerobic ammonia oxidation for nitrogen load suppression and performance recovery experiments. As shown in Fig. 1, the anammox reactor was an expanded granular sludge bed (EGSB) composed of plexiglass with an effective volume of 5 L. The external surface of the reactor was covered with light ...

aerate the water and maintain aerobic conditions. The unit serves as a fixed bed, downflow, granular media filter and separates particulate matter from the water. Additionally, the microorganisms that occupy the granular media surfaces provide any final nitrification reactions. As sludge collects on the EFB, it reduces its ability to filter.
