The thymus is inside the ribcage, just behind the breastbone. It filters and monitors our blood content. It produces cells called T-lymphocytes which circulate around the body. These cells are important for cell mediated response to an immune challenge, such as may occur when we have an infection. Other lymphoid tissue

### Lymphatic system - Better Health Channel

The T H lymphocytes function indirectly to identify potential pathogens for other cells of the immune system. These cells are important for extracellular infections, such as those caused by certain bacteria, helminths, and protozoa. T H lymphocytes recognize specific antigens displayed in the MHC II complexes of APCs. There are two major populations of T H cells: T H 1 and T H 2.
