HyperPhysics - Georgia State University

A superlens, or super lens, is a lens which uses metamaterials to go beyond the diffraction limit. For example, in 1995, Guerra combined a transparent grating having 50nm lines and spaces (the "metamaterial") with a conventional microscope immersion objective. The resulting "superlens" resolved a silicon sample also having 50nm lines and spaces, far beyond the classical diffraction limit ...

The above diagram shows what is occasionally a difficult concept to believe. Many students find it difficult to see how $10\text{ N} + 10\text{ N}$ could ever be equal to 10 N . For reasons to be discussed in the next section of this lesson, $10\text{ N} + 10\text{ N}$ would equal 10 N whenever the two forces to be added are at 30 degrees to the horizontal.

Addition of Forces - Physics Classroom

Then, in the reflective spirit myself, I critically examine the actual practice of the concept, highlighting ethical, professional, pedagogic and conceptual concerns. I put forward the case that reflective practice is both complex and situated and that it cannot work if applied mechanically or simplistically.
