Dummies Guide To Servers

Network Basics: Servers Server computers are the lifeblood of any network. Servers provide the shared resources that network users crave, such as file storage, databases, e-mail, Web services, and so on. Choosing the equipment you use for your network's servers is one of the key decisions you'll make when you set up a network.

Network Basics: Servers - dummies

The network computer that contains the hard drives, printers, and other resources that are shared with other network computers is called a server. This term comes up repeatedly, so you have to remember it. Write it on the back of your left hand. Any computer that's not a server is called a client.

Network Basics: Clients and Servers - dummies

A beginner's guide to servers What is a server? A server acts as a platform for sharing data (files / images) & applications (email etc.) across multiple users. A server uses many of the same components as a regular PC, but these are usually of a higher grade, designed & built for constant rather than sporadic use.
