Evaporation Into The Atmosphere Theory

Evaporation is a type of vaporization that occurs on the surface of a liquid as it changes into the gas phase. The surrounding gas must not be saturated with the evaporating substance. When the molecules of the liquid collide, they transfer energy to each other based on how they collide with each other.

Evaporation - Wikipedia

Lost of a substance into the atmosphere – One of the substances is usually lost to the atmosphere by performing evaporation. The vapour has to be recondensed to preserve it. This process is not suitable for systems where the solids are not soluble in mixtures. Loss of heat energy on subjecting the system to the evaporation process.
