Principle of the PCR. The purpose of a PCR (Polymerase Chain Reaction) ... Ionic bonds are constantly formed and broken between the single stranded primer and the single stranded template. The more stable bonds last a little bit longer (primers that fit exactly) and on that little piece of double stranded DNA ...

The best organizations, and even the best departments within organizations, have a roadmap: a clear vision of where they would like to be and the means by which they will get there. This roadmap drives the everyday activity of the company as well as any change it makes both internally and externally. And it is what drives projects. In fact, it is arguable that success in business is almost ...

Tissue harmonic imaging (THI) is a routinely used component of diagnostic ultrasonography (US). In this method, higher-frequency harmonic waves produced by nonlinear fundamental US wave propagation are used to generate images that contain fewer artifacts than those seen on conventional fundamental wave US tissue imaging.
