The most basic case of  
a gear train is the  
transmission of  
rotation and power  
between two parallel  
shafts. This is a two-  
dimensional case  
which allows for obser-  
vation in a plane. If the  
transmission of  
rotation should occur  
with a constant ratio,  
which means that in

In practice, the weighted average (marginal) cost of capital (WACC) may be virtually flat over a wide range of 'moderate' gearing. The extra risk as gearing increases may offset the lower marginal after-tax cost of debt (as compared with equity). So perhaps financial managers aim for no particular level of gearing, but
